Nodejs Express Mongodb `license` `MIT`

mongoose CRUD

```javascript
const mongoose = require('mongoose');
const Schema = mongoose.Schema;
const url = 'mongodb://localhost:27017/test';

mongoose.connect(url,{ useNewUrlParser: true}, function () {
    const user1 = new User({firstname: "John", lastname: "Patrick"});
    user1.save(function(err){
        if (err) console.log('Error', err);
        console.log(user1);
    });
});
const userSchema = Schema({
    firstname: String
    , lastname: String
});
const User = mongoose.model('User', userSchema);
```

RUN

1. Run mongod and mongo serices (If you get any error like connection faild, just create the folder C:\data\db)
2. npm run dev: concurrently execute MongoDB, Angular build, TypeScript compiler and Express server.
3. npm run prod: run the project with a production bundle and AOT compilation
